

# Table of contents

<b>Base quantities, units, and symbols from the international system (IS) .....</b>	<b>1</b>
<b>Chapter 1 – Description of ionic crystals.....</b>	<b>7</b>
Course notes.....	7
1.1 – Definitions .....	7
1.1.1 – The perfect crystal .....	7
1.1.2 – The real crystal .....	7
1.1.3 – Structure elements and effective charge.....	8
1.2 – Reactions and equilibria .....	9
1.2.1 – Atomic disorder and electronic disorder.....	9
1.2.2 – Writing the reactions.....	10
1.2.3 – Presence of foreign atoms .....	10
1.2.4 – Equilibrium with the environment.....	11
1.3 – Brouwer diagram .....	11
1.3.1 – Equilibria .....	11
1.3.2 – Electroneutrality relation and the Brouwer approximation .....	12
1.3.3 – Diagram for $\text{MX}_2$ crystal .....	13
1.3.4 – Case of solid solution $(\text{MX}_2)_{1-x}(\text{DX})_x$ .....	13
1.4 – Stoichiometry and departure from stoichiometry .....	14
Exercises.....	15
Exercise 1.1 – Notation for structure elements and structure defects .....	15
Exercise 1.2 – Notation for doping reactions .....	16
Exercise 1.3 – Sitoneutrality and expression of chemical formulas.....	18
Exercise 1.4 – Calculation of defect concentrations.....	18
Exercise 1.5 – Doping strontium fluoride.....	18
Exercise 1.6 – Variation of the concentration of structure defects in pure zirconium dioxide $\text{ZrO}_2$ as a function of oxygen partial pressure ...	19

---

Exercise 1.7 – The non-stoichiometry of iron monoxide .....	20
Exercise 1.8 – Departure from stoichiometry of barium fluoride BaF <sub>2</sub> .....	21
Exercise 1.9 – Crystallographic and thermodynamic study of thorium dioxide ThO <sub>2</sub> .....	22
 Solutions to exercises .....	24
Solution 1.1 – Notation for structure elements and structure defects.....	24
Solution 1.2 – Notation for doping reactions .....	25
Solution 1.3 – Sitoneutrality and notation for chemical formulas.....	28
Solution 1.4 – Calculation of defect concentrations.....	30
Solution 1.5 – Doping strontium fluoride.....	31
Solution 1.6 – Variation of the concentration of structure defects in pure zirconium dioxide ZrO <sub>2</sub> as a function of oxygen partial pressure ..	32
Solution 1.7 – The non-stoichiometry of iron monoxide .....	33
Solution 1.8 – Departure from stoichiometry of barium fluoride BaF <sub>2</sub> .....	35
Solution 1.9 – Crystallographic and thermodynamic study of thorium dioxide ThO <sub>2</sub> .....	39
 <b>Chapter 2 – Methods and techniques .....</b>	<b>47</b>
Course notes.....	47
2.1 – Complex impedance spectroscopy .....	47
2.1.1 – Time domain: principal passive linear dipole devices in sinusoidal regime.....	47
2.1.2 – Complex notation .....	47
2.1.3 – Graphical representation of complex impedance .....	48
2.1.4 – Other dipole devices .....	51
2.1.5 – Physical meaning of complex impedance spectra .....	52
2.2 – Methods to measure transport number .....	52
2.2.1 – Electromotive force method .....	52
2.2.2 – Using the results of total conductivity.....	53
2.2.3 – Tubandt method .....	54
2.2.4 – Dilatocoulometric method to measure cationic transport number ..	55
2.2.5 – Electrochemical semipermeability .....	56
2.2.6 – Blocking electrode method.....	57
 Exercises .....	59
Exercise 2.1 – Determination of conductivity by four-electrode method .....	59

Exercise 2.2 – Measurement of electric quantities by complex impedance spectroscopy .....	60
Exercise 2.3 – Measurement of electronic conductivity in a mixed conductor.....	62
Exercise 2.4 – Measurement of ionic conductivity in a mixed conductor .....	64
Exercise 2.5 – Determination of cationic transport number by dilatocoulometry..	65
Exercise 2.6 – Determination of cationic transport number in CaF <sub>2</sub> by dilatocoulometry.....	66
Exercise 2.7 – Electrochemical semipermeability.....	68
Exercise 2.8 – Determination of transport number by electrochemical semipermeability .....	68
Exercise 2.9 – Determination of conduction mode in $\alpha$ -AgI by Tubandt method .	69
 Solutions to exercises .....	71
Solution 2.1 – Determination of conductivity by four-electrode method.....	71
Solution 2.2 – Measurement of electric quantities by complex impedance spectroscopy .....	73
Solution 2.3 – Measurement of electronic conductivity in a mixed conductor.....	77
Solution 2.4 – Measurement of ionic conductivity in a mixed conductor.....	80
Solution 2.5 – Determination of cationic transport number by dilatocoulometry..	83
Solution 2.6 – Determination of cationic transport number in CaF <sub>2</sub> by dilatocoulometry.....	84
Solution 2.7 – Electrochemical semipermeability .....	87
Solution 2.8 – Determination of transport number by electrochemical semipermeability .....	89
Solution 2.9 – Determination of conduction mode in $\alpha$ -AgI by Tubandt method..	90
 <b>Chapter 3 – Transport in ionic solids.....</b>	<b>91</b>
Course notes.....	91
3.1 – Phenomenological approach to ionic transport in ionic crystals .....	91
3.1.1 – Electrochemical mobility and flux density .....	91
3.1.2 – Electrical conductivity and transport number.....	92
3.2 – Microscopic approach to ionic transport in crystals:	
Activated-hopping model .....	93
3.2.1 – Electric mobility .....	93
3.2.2 – Ionic conductivity .....	95
3.2.3 – Conductivity and temperature .....	95
3.2.4 – Conductivity and environment .....	97

3.2.5 – Ionic conductivity and composition .....	98
3.2.6 – Other parameters .....	99
3.3 – Basic description of Wagner theory.....	100
<b>Exercises.....</b>	<b>103</b>
Exercise 3.1 – Influence of geometric factor.....	103
Exercise 3.2 – Study of oxygen mobility in solid solutions $(\text{ThO}_2)_{1-x}(\text{YO}_{1.5})_x$ ..	104
Exercise 3.3 – Study of electronic conductivity in solid solutions $(\text{CeO}_2)_{1-x}(\text{CaO})_x$ ..	104
Exercise 3.4 – Electronic transport number in a glass.....	105
Exercise 3.5 – Electrical properties of potassium chloride KCl.....	106
Exercise 3.6 – Application of Nernst-Einstein relation to $\text{LiCF}_3\text{SO}_3$ in poly(ethylene oxide) P(EO).....	108
Exercise 3.7 – Electrical conductivity as a function of composition in $(\text{CeO}_2)_{1-x}(\text{YO}_{1.5})_x$ ..	109
Exercise 3.8 – Conductivity of nickel oxide .....	109
Exercise 3.9 – Ionic conductivity-activity relationship of glass modifier in oxide-based glasses .....	111
Exercise 3.10 – Electrochemical coloration .....	111
Exercise 3.11 – Oxygen diffusion in gadolinia-doped ceria.....	113
Exercise 3.12 – Electrical conductivity of solid vitreous solution $(\text{SiO}_2)_{1-x}(\text{Na}_2\text{O})_x$ .....	114
Exercise 3.13 – High-temperature protonic conductor $\text{SrZrO}_3$ .....	115
Exercise 3.14 – Free-volume model .....	118
Exercise 3.15 – Study of single-crystal calcium fluoride $\text{CaF}_2$ in the presence of oxygen .....	120
Exercise 3.16 – emf of a membrane crossed by an electrochemical semipermeability flux .....	122
Exercise 3.17 – Determination of electronic conductivity by electrochemical semipermeability .....	123
<b>Solutions to exercises .....</b>	<b>126</b>
Solution 3.1 – Influence of geometric factor .....	126
Solution 3.2 – Study of oxygen mobility in solid solutions $(\text{ThO}_2)_{1-x}(\text{YO}_{1.5})_x$ ..	127
Solution 3.3 – Study of electronic conductivity in solid solutions $(\text{CeO}_2)_{1-x}(\text{CaO})_x$ ..	129
Solution 3.4 – Electronic transport number in a glass.....	131
Solution 3.5 – Electrical properties of potassium chloride KCl.....	133

Solution 3.6 – Application of Nernst-Einstein relation to $\text{LiCF}_3\text{SO}_3$ in poly(ethylene oxide) P(EO).....	139
Solution 3.7 – Electrical conductivity as a function of composition in $(\text{CeO}_2)_{1-x}(\text{YO}_{1.5})_x$ .....	140
Solution 3.8 – Conductivity of nickel oxide.....	141
Solution 3.9 – Ionic conductivity-activity relationship of oxide modifier in oxide-based glasses .....	144
Solution 3.10 – Electrochemical coloration .....	146
Solution 3.11 – Oxygen diffusion in gadolinia-doped ceria .....	150
Solution 3.12 – Electrical conductivity of solid vitreous solution $(\text{SiO}_2)_{1-x}(\text{Na}_2\text{O})_x$ .....	153
Solution 3.13 – High-temperature protonic conductor $\text{SrZrO}_3$ .....	154
Solution 3.14 – Free-volume model .....	159
Solution 3.15 – Study of single-crystal calcium fluoride $\text{CaF}_2$ in the presence of oxygen .....	163
Solution 3.16 – emf of membrane crossed by an electrochemical semipermeability flux .....	165
Solution 3.17 – Determination of electronic conductivity by electrochemical semipermeability .....	167
<b>Chapter 4 – Electrode reactions .....</b>	<b>171</b>
Course notes – Thermodynamics and electrochemical kinetics .....	171
4.1 – Electrode thermodynamics .....	171
4.1.1 – Electrode.....	171
4.1.2 – Electrode potential.....	171
4.1.3 – Electrode polarization.....	172
4.1.4 – Electrode overpotential.....	172
4.1.5 – Current density .....	172
4.2 – Electrochemical kinetics.....	172
4.2.1 – Review .....	172
4.2.2 – Pure-charge-transfer regime (extreme case).....	173
4.2.3 – Mixed transfer-diffusion regime .....	174
4.2.4 – Regime of pure diffusion kinetics (extreme case).....	175
4.2.5 – Regime of adsorption of gaseous species .....	177
<b>Exercises .....</b>	<b>179</b>
Exercise 4.1 – Oxygen-diffusion-limited electrode.....	179

---

Exercise 4.2 – Study of oxygen-electrode reaction .....	180
Exercise 4.3 – Overpotential in an oxygen electrochemical pump .....	182
Exercise 4.4 – Determination of exchange current.....	185
Exercise 4.5 – Reduction of water vapor at the M/YSZ interface with M = Pt, Ni.....	186
Exercise 4.6 – Hydrogen oxidation at Ni/YSZ interface.....	187
<b>Solutions to exercises .....</b>	<b>189</b>
Solution 4.1 – Oxygen-diffusion-limited electrode.....	189
Solution 4.2 – Study of oxygen-electrode reaction .....	192
Solution 4.3 – Overpotential in an oxygen electrochemical pump .....	194
Solution 4.4 – Determination of exchange current.....	198
Solution 4.5 – Reduction of water vapor at the M/YSZ interface with M = Pt, Ni.....	200
Solution 4.6 – Hydrogen oxidation at Ni/YSZ interface .....	203
<b>Chapter 5 – Applications .....</b>	<b>205</b>
Course notes .....	205
5.1 – Electrochemical sensors .....	205
5.1.1 – Definition and characteristics .....	205
5.1.2 – Potentiometric sensor for gas analysis .....	206
5.1.3 – Amperometric sensor.....	207
5.1.4 – Coulometric sensor.....	208
5.1.5 – Conductometric sensor for gas analysis .....	208
5.2 – Electrochemical generators .....	208
5.2.1 – Definition and characteristics .....	208
5.2.2 – Discharge and (re)charge of electrochemical generators .....	209
5.2.3 – Primary batteries, fuel cells, and secondary batteries.....	210
<b>Exercises .....</b>	<b>212</b>
Exercise 5.1 – Determination of standard free enthalpy of formation for AgCl ..	212
Exercise 5.2 – Measurement of thermodynamic quantities of metal fluorides ....	212
Exercise 5.3 – Measurement of O <sup>2-</sup> ion activity in a molten salt.....	213
Exercise 5.4 – Calculation of equilibrium constants for defect formation in Cu <sub>2</sub> O .....	216
Exercise 5.5 – TiS <sub>2</sub> : insertion material .....	217
Exercise 5.6 – Chlorine sensor based on doped strontium chloride.....	219

Exercise 5.7 – CO <sub>2</sub> sensor (a).....	222
Exercise 5.8 – CO <sub>2</sub> sensor (b) .....	223
Exercise 5.9 – Sulfur oxide sensor .....	224
Exercise 5.10 – Oxygen semiconductor sensor.....	226
Exercise 5.11 – Amperometric oxygen sensor .....	228
Exercise 5.12 – Coulometric oxygen sensor .....	229
Exercise 5.13 – Nitrogen oxide sensor .....	230
Exercise 5.14 – The sodium-sulfur battery.....	234
Exercise 5.15 – General information on fuel cells .....	236
Exercise 5.16 – Solid oxide fuel cell (SOFC) .....	236
Exercise 5.17 – Use of hydrocarbons in SOFCs .....	238
Exercise 5.18 – Thermodynamic study of methane reforming in SOFC .....	239
Exercise 5.19 – Electrochemical integrator.....	241
 Solutions to exercises .....	242
Solution 5.1 – Determination of standard free enthalpy of formation for AgCl ..	242
Solution 5.2 – Measurement of thermodynamic quantities of metal fluorides....	243
Solution 5.3 – Measurement of O <sup>2-</sup> ion activity in a molten salt.....	244
Solution 5.4 – Calculation of equilibrium constants for defect formation in Cu <sub>2</sub> O.....	247
Solution 5.5 – TiS <sub>2</sub> : insertion material .....	250
Solution 5.6 – Chlorine sensor based on doped strontium chloride .....	253
Solution 5.7 – CO <sub>2</sub> sensor (a).....	259
Solution 5.8 – CO <sub>2</sub> sensor (b).....	263
Solution 5.9 – Sulfur oxide sensor .....	265
Solution 5.10 – Oxygen semiconductor sensor .....	270
Solution 5.11 – Amperometric oxygen sensor.....	274
Solution 5.12 – Coulometric oxygen sensor.....	277
Solution 5.13 – Nitrogen oxide sensor .....	278
Solution 5.14 – The sodium-sulfur battery .....	283
Solution 5.15 – General information on fuel cells .....	287
Solution 5.16 – Solid oxide fuel cell (SOFC).....	290
Solution 5.17 – Use of hydrocarbons in SOFCs.....	293
Solution 5.18 – Thermodynamic study of methane reforming in SOFC.....	297
Solution 5.19 – Electrochemical integrator .....	301

---

<b>Appendix – Fick's laws of diffusion .....</b>	<b>303</b>
<b>Bibliography .....</b>	<b>305</b>
<b>Glossary .....</b>	<b>309</b>
<b>Index .....</b>	<b>321</b>
