

# Contents

<b>Chapter 1 – Dosimetry of ionising radiation</b> .....	<b>1</b>
1.1 - Introduction .....	1
1.2 - Archaeological dating .....	3
1.2.1 - Principle of the method .....	3
1.2.2 - Determining the equivalent dose (palaeodose).....	6
1.2.3 - Assessing the dose rate .....	7
1.2.4 - Examples of archaeological and geological dating .....	9
1.3 - Retrospective dosimetry and radiation accident dosimetry .....	12
1.3.1 - Chronic and/or past exposure .....	13
1.3.2 - Radiation accident dosimetry and emergency situations.....	17
1.4 - A reference method: Alanine/EPR dosimetry .....	20
1.4.1- Description of the method .....	20
1.4.2 - Research and development in radiotherapy .....	22
1.4.3 - Sterilisation by irradiation.....	24
1.5 - Identifying irradiated food products .....	24
1.6 - Conclusion.....	26
References .....	27
<b>Chapter 2 – Tracing natural organic matter at the scale of drainage basins</b> .....	<b>29</b>
2.1 - Introduction .....	29
2.2 - Transformation and transfer of natural organic matter .....	31
2.3 - EPR signature of natural organic matter.....	34

---

<b>2.4 - Study areas and protocol applied</b> .....	<b>35</b>
2.4.1 - Description of the drainage basins studied .....	35
2.4.2 - Sample preparation .....	37
2.4.3 - Recording and simulation of EPR spectra .....	38
<b>2.5 - Assessing the EPR tracing method</b> .....	<b>38</b>
2.5.1 - EPR signatures can distinguish between different soil types and between horizons in a single soil .....	38
2.5.2 - EPR signatures can be used to monitor the transfer of NOM of various origins to hydrographic networks .....	41
2.5.3 - EPR signatures can be used to trace transfer of NOM from soils to natural recorders .....	42
<b>2.6 - Example of application of EPR tracing: identification of the inflow basin and     the residence time for water in a karst formation</b> .....	<b>45</b>
<b>2.7 - Conclusion</b> .....	<b>47</b>
<b>References</b> .....	<b>49</b>
<b>Chapter 3 – Detection and characterisation of free radicals after spin trapping</b> .....	<b>51</b>
<b>3.1 - Introduction</b> .....	<b>51</b>
<b>3.2 - Implementing the experiment</b> .....	<b>53</b>
3.2.1 - Trap selection .....	53
3.2.2 - Sample preparation .....	57
3.2.3 - Recording the spectrum .....	60
<b>3.3 - Analysis of EPR spectra</b> .....	<b>61</b>
3.3.1 - The information contained in the spectrum .....	61
3.3.2 - Analysis of spectra for spin adducts.....	64
<b>3.4 - Examples of spectra for adducts of classical radicals</b> .....	<b>65</b>
3.4.1 - Carbon-based radicals.....	65
3.4.2 - The hydroxyl radical .....	68
3.4.3 - The superoxide radical .....	71
3.4.4 - Alcoxy and peroxy radicals .....	72

---

3.4.5 - Other radicals .....	73
<b>3.5 - Kinetic aspects .....</b>	<b>74</b>
<b>3.6 - Limitations of the method and precautions to avoid artefacts .....</b>	<b>76</b>
<b>3.7 - Conclusion.....</b>	<b>78</b>
<b>References .....</b>	<b>80</b>
<b>Chapter 4 – Copper complexation by peptides implicated in neurodegenerative diseases .....</b>	<b>83</b>
<b>4.1 - Introduction .....</b>	<b>83</b>
<b>4.2 - EPR determination of the coordination of a Cu(II) ion by a peptide .....</b>	<b>85</b>
4.2.1 - EPR of Cu(II) complexes.....	85
4.2.2 - Example of EPR spectra for Cu(II)(peptide) complexes.....	86
<b>4.3 - Coordination of Cu(II) by the prion protein.....</b>	<b>89</b>
4.3.1 - Prion protein .....	89
4.3.2 - The sites of Cu(II) fixation on the N-terminal repeat domain .....	91
4.3.3 - The sites of Cu(II) fixation on the amyloidogenic domain.....	92
<b>4.4 - Cu(II) coordination by the amyloid-<math>\beta</math> peptide .....</b>	<b>97</b>
4.4.1 - Amyloid- $\beta$ peptide.....	97
4.4.2 - Determining the Cu(II) fixation sites on the human A $\beta$ peptide .....	98
4.4.3 - Comparison of human and rat A $\beta$ peptides .....	102
<b>4.5 - Conclusion.....</b>	<b>102</b>
<b>Complement 1 – Analysis of ESEEM and HYSCORE spectra for Cu(II)(A<math>\beta</math>16) complexes.....</b>	<b>104</b>
<b>References .....</b>	<b>107</b>
<b>Chapter 5 – Crystallochemistry of clay minerals, weathering processes and evolution of continental surfaces .....</b>	<b>109</b>
<b>5.1 - Introduction .....</b>	<b>109</b>
<b>5.2 - Kaolinite-group minerals .....</b>	<b>110</b>
<b>5.3 - Fe<sup>3+</sup> centres in kaolinite-group minerals .....</b>	<b>112</b>

5.3.1 - Interpretation of EPR signals for Fe <sup>3+</sup> centres .....	113
5.3.2 - Determining the absolute concentration of structural iron .....	119
<b>5.4 - Paramagnetic defects produced by irradiation .....</b>	<b>120</b>
<b>5.5 - Application of kaolinite EPR to the study of weathering processes in tropical climates .....</b>	<b>122</b>
5.5.1 - Alteration and formation of tropical soils.....	122
5.5.2 - Tracing kaolinite generations in tropical soils using Fe <sup>3+</sup> EPR .....	123
5.5.3 - EPR-dating of kaolinites from lateritic soils .....	127
<b>5.6 - Conclusion.....</b>	<b>132</b>
<b>References .....</b>	<b>133</b>
<b>Chapter 6 – Structure and catalytic mechanisms of redox enzymes.....</b>	<b>137</b>
<b>6.1 - Introduction .....</b>	<b>137</b>
6.1.1 - Redox enzymes and their paramagnetic centres .....	137
6.1.2 - Redox enzymes and EPR spectroscopy .....	140
<b>6.2 - Laccases: enzymes oxidising substrates with a high potential .....</b>	<b>141</b>
6.2.1 - A puzzle for spectroscopists: the structure of T <sub>1</sub> and T <sub>2</sub> copper-containing centres .....	142
6.2.2 - A reaction intermediate in oxygen reduction: a trinuclear Cu <sup>2+</sup> complex .....	145
6.2.3 - Oxidation of phenolic substrates or mediators .....	145
<b>6.3 - Hydrogenases: enzymes to oxidise and produce dihydrogen.....</b>	<b>145</b>
6.3.1 - The active site of Ni–Fe hydrogenases.....	147
6.3.2 - The electron transfer chain.....	152
<b>6.4 - Photosystem II: a solar energy-driven enzymatic complex.....</b>	<b>155</b>
6.4.1 - The enigmatic signal 2 .....	157
6.4.2 - The mysteries of the oxygen-evolving centre .....	160
<b>6.5 - Conclusion.....</b>	<b>164</b>
<b>Complement 1 - Interpreting the EPR properties of mononuclear copper-containing centres in proteins .....</b>	<b>167</b>

---

Complement 2 - Iron-sulfur centres and their EPR properties.....	168
References .....	170
<b>Chapter 7 – Seeking the origins of life: primitive carbonaceous matter .....</b>	<b>175</b>
7.1 - Introduction .....	175
7.1.1 - Primitive terrestrial carbonaceous matter .....	176
7.1.2 - Carbon before the formation of the Earth .....	177
7.1.3 - Carbon before the solar system .....	179
7.1.4 - What can carbon EPR contribute to exobiology?.....	180
7.2 - Primitive carbonaceous matter from the solar system: where and how did it emerge? .....	181
7.2.1 - Structure of the carbonaceous matter in meteorites.....	181
7.2.2 - EPR of meteoritic carbonaceous matter .....	182
7.2.3 - Review: the complex history of protosolar organic matter .....	194
7.3 - Terrestrial primitive carbonaceous matter: seeking biomarkers of the origins of life.....	195
7.3.1 - Line shape: a tool to date terrestrial carbonaceous matter .....	197
7.3.2 - EPR imaging of carbonaceous matter .....	204
7.3.3 - Seeking nuclear biosignatures.....	207
7.4 - Perspectives: destination Mars?.....	209
Complement 1 - Principle of quadrature phase detection.....	212
Complement 2 - Principle of EPR imaging.....	214
References .....	216
<b>Chapter 8 – Using paramagnetic probes to study structural transitions in proteins.....</b>	<b>219</b>
8.1 - Introduction .....	219
8.2 - EPR spectrum and mobility of nitroxide radicals.....	220
8.3 - Studying structural transitions by spin labelling .....	223
8.3.1 - Analysis of probe mobility .....	225

---

8.3.2 - Determining probe accessibility .....	228
8.3.3 - Measuring inter-probe distances .....	230
<b>8.4 - Activation of human pancreatic lipase .....</b>	<b>231</b>
8.4.1 - Attributing spectral features to HPL conformations.....	231
8.4.2 - Studying probe accessibility .....	234
8.4.3 - Assessing the amplitude of the conformational change.....	236
<b>8.5 - Folding induced by the measles virus nucleoprotein .....</b>	<b>238</b>
8.5.1 - Mapping interaction sites for the (N <sub>TAIL</sub> -XD) complex .....	239
8.5.2 - Conformational analysis of the (N <sub>TAIL</sub> -XD) complex.....	241
<b>8.6 - Conclusion.....</b>	<b>242</b>
<b>References .....</b>	<b>244</b>
<b>Chapter 9 – Organic radicals and molecular magnetism .....</b>	<b>247</b>
<b>9.1 - Introduction .....</b>	<b>247</b>
9.1.1 - Molecular materials .....	247
9.1.2 - Molecular magnetism .....	248
<b>9.2 - Molecules and methods of study.....</b>	<b>250</b>
9.2.1 - Nitronyl-nitroxide and imino-nitroxide radicals .....	250
9.2.2 - Contribution of EPR: characterisation of isolated molecules .....	252
<b>9.3 - Study of liquid solutions of diradicals and triradicals: revealing intramolecular exchange.....</b>	<b>255</b>
9.3.1 - Diradicals .....	255
9.3.2 - Triradicals.....	261
<b>9.4 - Study of frozen solutions.....</b>	<b>263</b>
9.4.1 - Information contained in the spectrum .....	263
9.4.2 - Study of diradicals: effect of length and topology of the linker on the <i>J</i> parameter .....	264
9.4.3 - Influence of the nature of the radical substituents on the <i>J</i> parameter in diradicals and triradicals.....	267
<b>9.5 - Conclusion.....</b>	<b>271</b>

---

<b>Complement 1 - Temperature-dependence of the susceptibility of dilute solutions monitored by EPR</b> .....	<b>273</b>
<b>Complement 2 - What molecular orbital calculations provide</b> .....	<b>276</b>
<b>References</b> .....	<b>280</b>
<b>Chapter 10 – EPR of short-lived magnetic species</b> .....	<b>283</b>
<b>10.1 - Introduction</b> .....	<b>283</b>
<b>10.2 - Freeze quench and flow methods</b> .....	<b>284</b>
10.2.1 - Freeze quench .....	285
10.2.2 - Continuous flow and stopped flow methods .....	286
<b>10.3 - How can acquisition of an EPR spectrum be accelerated?</b> .....	<b>287</b>
10.3.1 - Theoretical time resolution of an EPR experiment .....	287
10.3.2 - Practical time resolution .....	288
<b>10.4 - Time-resolved EPR for radicals in solution</b> .....	<b>291</b>
10.4.1 - Electron spin polarisation: the CIDEP effect.....	291
10.4.2 - Examples of spectra for photoinduced radicals in microsecond TR-EPR.....	293
10.4.3 - Radical pair CIDEP mechanism.....	298
10.4.4 - The triplet CIDEP mechanism.....	300
10.4.5 - Superposition of the RPM and TM mechanisms. Other mechanisms .....	302
<b>10.5 - Time-resolved EPR for excited states in the solid phase</b> .....	<b>303</b>
<b>10.6 - Conclusion</b> .....	<b>305</b>
<b>Complement 1 - Numerical solutions to the Bloch equations in the transient regime</b> .....	<b>307</b>
<b>References</b> .....	<b>311</b>
<b>Chapter 11 – Characterising contrast agents for magnetic resonance imaging</b> .....	<b>313</b>
<b>11.1 - Introduction</b> .....	<b>313</b>
<b>11.2 - MRI methods</b> .....	<b>314</b>
11.2.1 - General principle .....	314
11.2.2 - Role of contrast agents in MRI .....	316

<b>11.3 - Effect of a Gd<sup>3+</sup> complex on relaxation of water protons</b> .....	<b>317</b>
11.3.1 - General notions .....	317
11.3.2 - Inner sphere proton relaxivity .....	320
11.3.3 - Outer sphere proton relaxivity .....	322
11.3.4 - Influence of the electronic spin relaxation of Gd <sup>3+</sup> .....	323
<b>11.4 - Modelling Gd<sup>3+</sup> electronic relaxation</b> .....	<b>325</b>
11.4.1 - Fluctuations of the zero-field splitting term.....	325
11.4.2 - Expression for the electronic relaxation time T <sub>1e</sub> for Gd <sup>3+</sup> .....	327
<b>11.5 - Estimation of the parameters determining the paramagnetic relaxation of protons</b> .....	<b>329</b>
11.5.1 - Survey of parameters .....	329
11.5.2 - What EPR provides .....	331
<b>11.6 - Simulating the EPR spectrum and longitudinal relaxation of gadolinium complexes</b> .....	<b>332</b>
11.6.1 - General theory .....	332
11.6.2 - Numerical simulation of the electronic relaxation of Gd <sup>3+</sup> by the Monte Carlo method.....	333
<b>11.7 - Examples of simulations of EPR spectra for Gd<sup>3+</sup> complexes</b> .....	<b>334</b>
11.7.1 - The hydrated Gd <sup>3+</sup> complex .....	334
11.7.2 - The GdDOTA complex .....	336
11.7.3 - The GdACX complex.....	338
<b>11.8 - Performance of Gd<sup>3+</sup> complexes as contrast agents</b> .....	<b>339</b>
<b>11.9 - Perspectives</b> .....	<b>342</b>
<b>Complement 1 - Influence of the rate of exchange of inner sphere water molecules on proton relaxivity</b> .....	<b>344</b>
<b>Complement 2 - Elements of the method used to simulate EPR spectra for Gd<sup>3+</sup> complexes</b> .....	<b>346</b>
<b>References</b> .....	<b>348</b>

---

<b>Chapter 12 – Ferromagnetic resonance spectroscopy: basics and applications</b> .....	<b>351</b>
12.1 - Introduction .....	351
12.2 - Principle of FMR .....	353
12.2.1 - Expression of the energy of the demagnetising field .....	354
12.2.2 - Expression for the magnetocrystalline anisotropy energy .....	355
12.2.3 - Expression for the resonance frequency .....	355
12.2.4 - Dissipation and relaxation phenomena: width of the resonance line.....	358
12.3 - Experimental aspects.....	359
12.4 - FMR of ultrathin metallic layers: epitaxial Fe films grown on (100) GaAs.....	360
12.4.1 - Surface/interface anisotropies.....	364
12.4.2 - Relaxation mechanisms .....	365
12.5 - III–V ferromagnetic semiconductors: $\text{Ga}_{1-x}\text{Mn}_x\text{As}/(100)\text{GaAs}$ .....	365
12.5.1 - Constraints and magnetocrystalline anisotropy.....	367
12.5.2 - FMR studies .....	367
12.6 - Maghemite nanoparticle ferrofluids .....	371
12.6.1 - Presentation of the nanoparticles.....	372
12.6.2 - FMR study of the magnetic anisotropy of the nanoparticles .....	373
12.6.3 - Evidence for a superparamagnetic component .....	378
12.7 - Conclusion.....	381
References .....	382
<b>Appendix 1 – Principles of magnetic resonance: Bloch equations and pulsed methods</b> .....	<b>385</b>
1 - Proton NMR.....	385
2 - Motion of the macroscopic magnetisation.....	387
3 - Relaxation phenomena .....	389
References .....	392

---

<b>Appendix 2 – Introduction to pulsed EPR: ESEEM, HYSCORE and PELDOR experiments</b> .....	<b>393</b>
1 - Spin echo and ESEEM experiments .....	394
1.1 - Spin echo .....	394
1.2 -2-pulse ESEEM experiments .....	396
1.3 -3-pulse ESEEM experiments .....	397
2 - 4-pulse ESEEM experiments and HYSCORE experiments .....	399
3 - PELDOR experiments .....	400
References .....	403
<b>Appendix 3 – Principle of continuous wave ENDOR spectroscopy</b> .....	<b>405</b>
1 - Introduction.....	405
2 - ENDOR spectrum for radicals in the isotropic regime .....	406
2.1 - Positions of ENDOR lines .....	406
2.2 - Effect of NMR transitions on the amplitude of EPR lines .....	410
3 - ENDOR spectrum of a polycrystalline powder or frozen solution.....	412
4 - Comparison with pulsed ENDOR and other high-resolution spectroscopic techniques.....	415
References .....	417
<b>Appendix 4 – Macromolecules with very varied functions: proteins</b> .....	<b>419</b>
1 - From sequence to structure .....	419
2 - From structure to function .....	423
3 - Contribution of EPR to the study of proteins .....	424
References .....	426
<b>Index</b> .....	<b>427</b>
