CONTENTS

1 - Basic notions 1

1.1 - Introduction 1
1.1.1 - Etymology 1
1.1.2 - The historical development of ideas 2
1.1.3 - Socioeconimic importance 4

1.2 - Oxidation-reduction 7
1.2.1 - The modern notion of oxidation-reduction 8
⏩ The origins of the VOLTA battery 10
1.2.2 - Oxidation number 12
1.2.3 - How to write a redox half-reaction 14

1.3 - The notion of current 17
1.3.1 - Macroscopic quantities defining the current 17
1.3.1.1 - Current density 17
1.3.1.2 - Current 17
1.3.1.3 - Electroneutrality and conservative current 18
1.3.2 - Conducting media 19
1.3.2.1 - Different charge carriers 19
1.3.2.2 - Different classes of conductors 19
⏩ On electrodes 21
1.3.3 - Electrodes and interfaces 22

1.4 - Description and operation of an electrochemical chain 25
1.4.1 - General features 25
1.4.1.1 - Electrochimical cell and chain 25
1.4.1.2 - The polarity of the electrodes 26
1.4.1.3 - Sign convention for the current through an interface 27
1.4.2 - Forced current flow: electrolyser mode 30
⏩ Sign convention for current 31
1.4.3 - Spontaneous current flow: power source mode 33
1.4.4 - Spontaneous or forced current flow 34

1.5 - Notions of potential - voltage - polarisation 34
1.5.1 - Voltages and potentials in an electrochemical cell 34
1.5.1.1 - Standard hydrogen electrode 35
1.5.1.2 - Reference electrodes 35
1.5.1.3 - The polarity of the electrodes 39
1.5.2 - Polarisations and overpotentials in an electrochemical cell 39

1.6 - Experimentation in electrochemistry 40
1.6.1 - Measurement devices 40
1.6.2 - Power supply and control devices 41
1.6.3 - Different types of electric control 43
1.6.4 - Steady state 44
⏩ Electrochemical devices 45
1.6.5 - Main electrochemical methods 46

Questions on chapiter 1 48

2 - Simplified description of electrochemical systems 51

2.1 - Characteristics of systems in thermodynamic equilibrium 51
2.1.1 - Distribution of the electric potentials at equilibrium 51
2.1.2 - Potentiometry at equilibrium 53
2.1.2.1 - NERNST's law 53
⏩ Industrial production of aluminium in France 56
2.1.2.2 - Apparent standard potential 58
2.1.2.3 - The water redox couples 59

2.2 - Characteristics of systems with a current flowing 61
2.2.1 - Phenomena occurring when a current is flowing 61
2.2.1.1 - Volume conduction 61
2.2.1.2 - Phenomena occurring at interfaces 64
2.2.2 - The faradic phenomena 68
2.2.2.1 - Faradic current and capacitive current 68
2.2.2.2 - FARADAY's law 68
2.2.2.3 - Faradic yield 69
⏩ The first electric vehicles 71
2.2.3 - Cell voltage distribution 72
2.2.4 - Ohmic drop in a conducting medium 75
2.2.4.1 - OHM's law and the ohmic drop 75
2.2.4.2 - Movement direction *via* migration 77
2.2.4.3 - Molar conductivities and transport numbers 80
2.2.4.4 - The supporting electrolyte 81

2.3 - The shape of the current-potential curves 83
2.3.1 - General characteristics 84
2.3.1.1 - Polarisation sign 84
2.3.1.2 - Steady-state curves 86
2.3.2 - Role of mass transport kinetics 87
2.3.2.1 - Limiting current 87
2.3.2.2 - Half-wave potential 89
⏩ Regulating of fuel engines 91
2.3.3 - Role of redox reaction kinetics 92
2.3.4 - Additivity of faradic currents or current densities 94
2.3.5 - Water redox couples 95
⏩ Energy storage: the Li-Metal-Polymer (LMP) batteries 99
2.3.6 - Electrochemical window 100

2.4 - Predicting reactions 102
2.4.1 - Spontaneous evolution of a system at open circuit 102
2.4.2 - Working points of a whole electrochemical system 105
2.4.3 - Predicting reactions in electrolyser mode 108
2.4.4 - Predicting reactions in power source mode 110
2.4.5 - Various working conditions of an electrochemical system 112

Questions on chapiter 2 115

3 - Thermodynamic features 119

3.1 - Concepts of potential 119
3.1.1 - Electric potential 120
3.1.1.1 - Electric potential and electroneutrality 120
3.1.1.2 - VOLTA and GALVANI potentials 121
3.1.2 - Chemical and electrochemical potentials 122
3.1.2.1 - Chemical potential 122
3.1.2.2 - Electrochemical potential 124
3.1.2.3 - Convention for thermodynamic data tables 125
⏩ Fuel cells 126

3.2 - Thermodynamic equilibrium in a monophasic system 128
3.2.1 - Electrolytic solution 129
3.2.1.1 - Mean activity and mean activity coefficient 129
3.2.1.2 - Ionic strength 130
3.2.1.3 - DEBYE-HÜCKEL's model 132
3.2.2 - Metallic electrode 135
3.2.2.1 - Electrochemical potential 135
3.2.2.2 - FERMI's energy 136
3.2.2.3 - Electron work function 136

3.3 - Thermodynamic equilibrium at an interface 137
3.3.1 - Thermodynamic equilibrium at a non-reactive interface 137
3.3.2 - Thermodynamic equilibrium at a reactive interface 139
⏩ Electrochemistry and neurobiology 142
3.3.3 - Thermodynamic equilibrium at a reactive interface involving a single reaction between neutral species 144
3.3.4 - Thermodynamic equilibrium at a reactive interface involving a single reaction between charged species 145
3.3.4.1 - Junction with the exchange of a single charged species 145
3.3.4.2 - Reactive electrochemical interface with a single reaction 148
3.3.5 - Multi-reactive junction or interface 149

3.4 - Electrochemical systems in equilibrium 151
3.4.1 - Electrochemical cells with no ionic junction 151
3.4.1.1 - Thermodynamic reaction quantities 152
⏩ Corrosion of reinforced concrete 154
3.4.1.2 - NERNST's law 156
3.4.1.3 - Considering multiple chemical equilibria 158

3.4.1.4 - Particular cases involving acido-basic equilibria ... 159
3.4.2 - Experimental aspects ... 161
3.4.2.1 - Ionic junctions ... 161
3.4.2.2 - Reference electrodes ... 161

4.2.1 - Conduction phenomena: a macroscopic approach ... 186
4.2.1.1 - Different driving forces for transport ... 186
4.2.1.2 - Thermodynamics of linear irreversible processes ... 187
4.2.1.3 - Link between migration and diffusion ... 189
4.2.1.4 - Expressing molar flux and current densities ... 190
4.2.1.5 - General equations in a monophasic conductor ... 192
4.2.2 - Conduction phenomena: mechanisms and orders of magnitude ... 197
4.2.2.1 - Examples of conduction mechanisms ... 197
⏩ Energy storage: supercapacitors ... 200
4.2.2.2 - Conductivity measurements ... 201
4.2.2.3 - Orders of magnitude for conduction parameters ... 203
4.2.2.4 - Models for solutions at infinite dilution ... 203
4.2.2.5 - Case of concentrated solutions ... 207
4.2.3 - Situations in which the ohmic drop does not follow the macroscopic OHM law ... 208

4.3 - Current flow through an electrochemical interface ... 209
4.3.1 - Potential and concentration profiles at an interface ... 209
4.3.1.1 - Potential profile ... 209
4.3.1.2 - Concentration profiles ... 210
4.3.1.3 - Example of a transient state: semi-infinite diffusion ... 215
4.3.1.4 - Example of a steady state: the NERNST model ... 218
4.3.1.5 - Directions of the various current densities ... 220
4.3.2 - Kinetic model for a heterogeneous reaction ... 221
4.3.2.1 - General ... 221
4.3.2.2 - Rate of a heterogeneous reaction ... 222

4.3.2.3 - Simplified kinetic model of the E mechanism (single step) 223
4.3.2.4 - Rate-limiting or determining step 225
4.3.2.5 - Reversibility character of an elementary reaction step 226
4.3.2.6 - Rapidity of a redox couple 227
4.3.3 - Polarisation of an electrochemical interface at steady state 228
4.3.3.1 - Concentration profiles and equation for the limiting currents 229
⏩ Scanning electrochemical microscope 232
4.3.3.2 - Fast redox systems 234
4.3.3.3 - Slow redox systems 235
4.3.3.4 - General case 240

4.4 - Complete electrochemical systems with a current flowing 242
4.4.1 - One-compartment cell 242
4.4.1.1 - Cases where all steady states correspond to zero-current 242
4.4.1.2 - Obtaining non-zero-current steady states 245
⏩ Electrodialysis 246
4.4.2 - Cell with two separate compartments 248
4.4.2.1 - Different types of separation 249
4.4.2.2 - Steady states with a non-zero current 251
4.4.2.3 - Characteristics of the transient period: the HITTORF mass balance 252
⏩ HITTORF's mass balance experiment 254
4.4.2.4 - Industrial applications 256

Questions on chapiter 4 257

Appendices 261

A.1.1 - Liquid ionic junction voltage without current 261
The HENDERSON equation and its impact in practical terms 261
Basic elements for demonstrating the HENDERSON equation 263

A.1.2 - Potentiostat and galvanostat 265

A.2.1 - General shape of the current-potential curve
for reducing water or protons: the role of mass transport kinetics 267

A.2.2 - Different working points for an electrochemical system 272

A.3.1 - Electric potential: VOLTA and GALVANI potentials 275

A.3.2 - Mean activity of a solute in an electrolyte 277
Electrochemical chains with no ionic junction 277
Electrochemical chains with an ionic junction 278

A.3.3 - DEBYE-HÜCKEL's model 280

A.3.4 - Thermodynamic equilibrium at a reactive interface
involving a single reaction between charged or neutral species 284
Exchange of neutral species M 285
Exchange of cation M^+ 285
Redox equilibrium at an electrochemical interface 287

A.4.1 - Highlighting the role of the supporting electrolyte in mass transport and its impact on an electrolysis cell 289
Solution with no supporting electrolyte (solution S_1) 291
Solution with a supporting electrolyte (solution S_2) 300

A.4.2 - Concentration profiles at an interface 307
Chronopotentiometry with semi-infinite unidirectional diffusion 308
Chronopotentiometry with steady-state unidirectional diffusion 310
Chronopotentiometry with diffusion-convection according to the NERNST model 311
Chronoamperometry with steady-state unidirectional diffusion 312
