

Jacques Lafontaine

# An Introduction to Differential Manifolds

 Springer

## Grenoble Sciences

The aim of Grenoble Sciences is twofold:

- to produce works corresponding to a clearly defined project, without the constraints of trends nor curriculum,
- to ensure the utmost scientific and pedagogic quality of the selected works: each project is selected by Grenoble Sciences with the help of anonymous referees. In order to optimize the work, the authors interact for a year (on average) with the members of a reading committee, whose names figure in the front pages of the work, which is then co-published with the most suitable publishing partner.

### Scientific Director of Grenoble Sciences

Jean Bornarel, Emeritus Professor  
at the Joseph Fourier University, Grenoble, France

Grenoble Sciences is a department of the Joseph Fourier University supported by the **ministère de l'Enseignement supérieur et de la Recherche** and the **région Rhône-Alpes**.

*An Introduction to Differential Manifolds* is a translation of the original book *Introduction aux variétés différentielles* (2nd ed.) by Jacques Lafontaine, EDP Sciences, Grenoble Sciences Series, 2010, ISBN 978 2 7598 0572 3.

The reading committee of the French version included the following members:

- **Pierre Averbuch**, Emeritus CNRS Senior Researcher, Grenoble
- **Pierre Bérard**, Professor, Joseph Fourier University, Grenoble I
- **Gaël Meigniez**, Professor, Bretagne-Sud University
- **Jean-Yves Mérindol**, Professor, President of Sorbonne Paris Cité

Translation from original French version performed by Éric Bahuaud; excerpt from *le Livre de mon ami* by Anatole France translated by Jonathan Upjohn; typesetting: ARCHITEX; figures: Sylvie Bordage; cover illustration: Alice Giraud, after *Klein bottle* by Thomas Banchoff and Jeff Beall (Brown University), *The “figure 8” immersion of the Klein bottle* by Fropuff and Inductiveload (KleinBottle-Figure8-01.png, 2007, *Wikimedia Commons*) and elements provided by the author.

# Contents

<b>Chapter 1 – Differential Calculus</b>	<b>1</b>
1.1. Introduction	1
1.1.1. What Is Differential Calculus?	1
1.1.2. In This Chapter	3
1.2. Differentials	4
1.2.1. Definition and Basic Properties	4
1.2.2. Three Fundamental Examples	7
1.2.3. Functions of Class $C^p$	10
1.3. The Chain Rule	11
1.4. Local Invertibility	14
1.4.1. Diffeomorphisms	14
1.4.2. Local Diffeomorphisms	16
1.4.3. Immersions, Submersions	18
1.5. Submanifolds	21
1.5.1. Basic Properties	21
1.5.2. Examples: Spheres, Tori, and the Orthogonal Group	23
1.5.3. Parametrizations	25
1.5.4. Tangent Vectors, Tangent Space	26
1.6. One-Parameter Subgroups of the Linear Group	29
1.7. Critical Points	33
1.8. Critical Values	36
1.9. Differential Calculus in Infinite Dimensions	38
1.10. Comments	40
1.11. Exercises	42

<b>Chapter 2 – Manifolds: The Basics</b>	<b>49</b>
2.1. Introduction .....	49
2.1.1. A Typical Example: The Set of Lines in the Plane.....	49
2.1.2. In This Chapter .....	51
2.2. Charts, Atlases.....	51
2.2.1. From Topological to Smooth Manifolds .....	51
2.2.2. First Examples.....	54
2.3. Differentiable Functions; Diffeomorphisms .....	56
2.4. Fundamental Theorem of Algebra .....	60
2.5. Projective Spaces .....	61
2.6. The Tangent Space; Maps.....	67
2.6.1. Tangent Space, Linear Tangent Map.....	67
2.6.2. Local Diffeomorphisms, Immersions, Submersions, Submanifolds.....	69
2.7. Covering Spaces.....	73
2.7.1. Quotient of a Manifold by a Group .....	74
2.7.2. Simply Connected Spaces .....	81
2.8. Countability at Infinity .....	83
2.9. Comments .....	85
2.10. Exercises .....	87
<b>Chapter 3 – From Local to Global</b>	<b>97</b>
3.1. Introduction .....	97
3.2. Bump Functions; Embedding Manifolds .....	98
3.3. Derivations.....	103
3.3.1. Derivation at a Point .....	103
3.3.2. Another Point of View on the Tangent Space .....	106
3.3.3. Global Derivations .....	108
3.4. Image of a Vector Field; Bracket.....	110
3.5. The Tangent Bundle .....	113
3.5.1. The Manifold of Tangent Vectors.....	113
3.5.2. Vector Bundles.....	114
3.5.3. Vector Fields on Manifolds; The Hessian.....	117
3.6. The Flow of a Vector Field .....	119
3.7. Time-Dependent Vector Fields .....	127
3.8. One-Dimensional Manifolds.....	131
3.9. Comments .....	133
3.10. Exercises .....	137

---

<b>Chapter 4 – Lie Groups</b>	<b>147</b>
4.1. Introduction .....	147
4.2. Left Invariant Vector Fields.....	148
4.3. The Lie Algebra of a Lie Group.....	154
4.3.1. Basic Properties; The Adjoint Representation.....	154
4.3.2. From Lie Groups to Lie Algebras.....	157
4.3.3. From Lie Algebras to Lie Groups.....	158
4.4. A Digression on Topological Groups .....	161
4.5. Commutative Lie Groups .....	167
4.5.1. A Structure Theorem .....	167
4.5.2. Towards Elliptic Curves .....	170
4.6. Homogeneous Spaces.....	171
4.7. Comments .....	176
4.8. Exercises .....	178
<b>Chapter 5 – Differential Forms</b>	<b>185</b>
5.1. Introduction .....	185
5.1.1. Why Differential Forms? .....	185
5.1.2. Abstract.....	186
5.2. Multilinear Algebra .....	187
5.2.1. Tensor Algebra.....	187
5.2.2. Exterior Algebra.....	189
5.2.3. Application: The Grassmannian of 2-Planes in 4 Dimensions..	193
5.3. The Case of Open Subsets of Euclidean Space .....	194
5.3.1. Forms of Degree 1 .....	194
5.3.2. Forms of Arbitrary Degree.....	196
5.4. Exterior Derivative .....	199
5.5. Interior Product, Lie Derivative.....	204
5.6. Poincaré Lemma .....	209
5.6.1. Star-Shaped Open Subsets.....	209
5.6.2. Forms Depending on a Parameter .....	212
5.7. Differential Forms on a Manifold .....	213
5.8. Maxwell’s Equations .....	218
5.8.1. Minkowski Space .....	218
5.8.2. The Electromagnetic Field as a Differential Form .....	219
5.8.3. Electromagnetic Field and the Lorentz Group .....	220

---

5.9. Comments .....	222
5.10. Exercises .....	225
<b>Chapter 6 – Integration and Applications</b>	<b>235</b>
6.1. Introduction .....	235
6.2. Orientation: From Vector Spaces to Manifolds .....	237
6.2.1. Oriented Atlas .....	237
6.2.2. Volume Forms .....	239
6.2.3. Orientation Covering .....	242
6.3. Integration of Manifolds; A First Application .....	244
6.3.1. Integral of a Differential Form of Maximum Degree .....	244
6.3.2. The Hairy Ball Theorem .....	246
6.4. Stokes’s Theorem .....	248
6.4.1. Integration on Compact Subsets .....	248
6.4.2. Regular Domains and Their Boundary .....	249
6.4.3. Stokes’s Theorem in All of Its Forms .....	253
6.5. Canonical Volume Form of a Submanifold of Euclidean Space .....	257
6.6. Brouwer’s Theorem .....	262
6.7. Comments .....	265
6.8. Exercises .....	266
<b>Chapter 7 – Cohomology and Degree Theory</b>	<b>273</b>
7.1. Introduction .....	273
7.2. De Rham Spaces .....	275
7.3. Cohomology in Maximum Degree .....	277
7.4. Degree of a Map .....	281
7.4.1. The Case of a Circle .....	281
7.4.2. Definition and Basic Properties in the General Case .....	283
7.4.3. Invariance of the Degree under Homotopy; Applications .....	286
7.4.4. Index of a Vector Field .....	289
7.5. Fundamental Theorem of Algebra: Revisited .....	292
7.5.1. Two Proofs of the Fundamental Theorem of Algebra Using Degree Theory .....	292
7.5.2. Comparison of the Different Proofs of the Fundamental Theorem of Algebra .....	293
7.6. Linking .....	295
7.7. Invariance under Homotopy .....	299

7.8. The Mayer-Vietoris Sequence..... 303  
     7.8.1. Exact Sequences ..... 303  
     7.8.2. The Mayer-Vietoris Sequence ..... 304  
     7.8.3. Application: A Few Cohomology Calculations ..... 307  
     7.8.4. The Noncompact Case..... 309  
 7.9. Integral Methods ..... 310  
 7.10. Comments ..... 313  
 7.11. Exercises ..... 315

**Chapter 8 – Euler-Poincaré and Gauss-Bonnet 323**

8.1. Introduction ..... 323  
     8.1.1. From Euclid to Carl-Friedrich Gauss  
         and Pierre-Ossian Bonnet..... 323  
     8.1.2. Sketch of a Proof of the Gauss-Bonnet Theorem..... 325  
     8.1.3. Abstract..... 326  
 8.2. Euler-Poincaré Characteristic ..... 326  
     8.2.1. Definition; Additivity ..... 326  
     8.2.2. Tilings..... 328  
 8.3. Invitation to Riemannian Geometry..... 331  
 8.4. Poincaré-Hopf Theorem ..... 336  
     8.4.1. Index of a Vector Field: Revisited..... 336  
     8.4.2. A Residue Theorem..... 336  
 8.5. From Poincaré-Hopf to Gauss-Bonnet ..... 339  
     8.5.1. Proof Using the Classification Theorem for Surfaces ..... 339  
     8.5.2. Proof Using Tilings: Sketch ..... 340  
     8.5.3. Putting the Preceding Arguments Together ..... 341  
 8.6. Comments ..... 344  
 8.7. Exercises ..... 346

**Appendix: The Fundamental Theorem of Differential Topology 349**

**Solutions to the Exercises 351**

**Bibliography 383**

**Index 393**
